NADER ABDULMALEK AL-GHAFRI

Biomedical Engineer

Damascus, Syria | +963 959 875 389 | [your.email@gmail.com] | [linkedin.com/in/your-name]

PROFILE

Biomedical engineer with 17 months of hospital maintenance work on sterilization, hemodialysis and anesthesia equipment. Calibrates devices, replaces internal components and traces faults from the alarm to the failed part. Research background in polymer nanostructures for theranostics, with a cancer cell detection study presented at a biomedical engineering conference in 2025.

EXPERIENCE

Anesthesia Equipment Maintenance 8 months

[Hospital or company name], Damascus

- Ran preventive and corrective maintenance on anesthesia workstations: ventilator modules, vaporizers, gas flow systems and breathing circuits.
- Calibrated flow and pressure sensors and performed leak tests before releasing machines to the operating room.

Sterilization Equipment Maintenance 6 months

Al-Mouwasat University Hospital, Damascus

- Maintained steam autoclaves and sterilization units, including door seals, valves, heaters and control boards.
- Calibrated temperature and pressure sensors to keep sterilization cycles within specification.

Hemodialysis Equipment Maintenance 3 months

[Hospital or center name], Damascus

- Serviced hemodialysis machines: blood pumps, hydraulic circuits, and conductivity and temperature sensors.
- Diagnosed machine alarms, replaced faulty parts and ran functional checks before patient use.

EDUCATION

B.Sc. Biomedical Engineering [Graduation year]

Al-Andalus University for Medical Sciences, Syria

- **Graduation project:** Polymer-Based Nanostructures for Theranostics. Designed a polymer nanostructure that combines diagnosis and targeted therapy in one carrier.
- **Applied project:** Crystal-Based Detection of Cancer Cells.

RESEARCH

- Presented a paper on crystal-based cancer cell detection at [conference name], 2025.

TRAINING

- Echocardiography and Diagnostic Ultrasound: operating ultrasound systems, probe selection and image acquisition.

SKILLS

- **Equipment maintenance:** calibration, fault diagnosis, component replacement, preventive and corrective maintenance
- **Engineering:** medical device design, biomaterials, biomechanics
- **Software:** MATLAB, Python, SQL (data analysis), Proteus 8 Professional
- **Professional:** teamwork, problem solving, time management, Agile methods, work under pressure
